THINK TECH FORWARD

PRODUCT DETAILS

About FF-N Series

I Development Background

Upgrade of industry and product

While the industrial upgrading in China requires high-quality, high-precision, and high-efficiency equipment, the end users demand products with higher quality, better appearance, and more reliability.

Strong customer base

With the in-depth understanding of customer pain points and demand which based on tens of thousands of customers over time, we have set up a professional team to develop more cost-effective electric injection molding machines.

Times call for domestically manufactured alternatives

While the Japanese products dominate the market at present, customers desire to have domestically manufactured alternatives to the imports for a more prompt comprehensive support and the best value for money.

Automation and intellectualization are the trends

The growing demands for industrial automation and intellectualization ask for better products to increase customer value. YIZUMI responds to this need with the new generation FF series electric injection molding machines.

I Core value Proposition

YIZUMI is committed to developing a product that meets the technology and quality standards of Japanese electric injection molding machines, provides more cost-effective experiences, and better fulfills customers' expectations of return on investment.

Upgrade from conventional models

Upgrading to a level that has higher requirements than conventional machines and allows customers to easily realize the automation and intellectualization while improving quality consistency and efficiency.

Upgrade to meet application requirements

Compared to conventional models, the new electric series of injection molding machines enhances the performance in all aspects to meet the optimized requirements (e.g. Thickness, precision, and complexity) of more stringent core elements of products.

I Critical Success Factors

Warranted by the overall strength of YIZUMI

YIZUMI has the powerful capacity in HW/SW development, competent R&D teams, and rigorous quality control system.

In-depth industrial know-how and collaboration

With years of accumulated knowledge in machine designs, YIZUMI is committed to creating the electric injection molding machines that meet our customer's product needs through collaboration with international top-level expert teams.

Advanced integrated project development (IPD) process assurance

The rigorous and comprehensive IPD process established based on the in-depth understanding of customer needs and pain points ensures a high degree of customer satisfaction.

FF-N Series Electric Injection Molding Machine

Three Major Customer Value Propositions:

 Stability & Precision

 Efficiency & Flexibility

 Automation & Intellectualization

YIZUMI is committed to developing a product that meets the technology and quality standards of Japanese electric injection molding machines, provides more cost-effective experiences, and better fulfills customers' expectations of return on investment. Upgrading to a level that has higher requirements than conventional machines and allows customers to easily realize the automation and intellectualization while improving quality consistency and efficiency. Performance improvement in all aspects in comparison with conventional models to meet the optimized requirements (e.g. Thickness, precision, and complexity) of more stringent core elements of products.

<0.3% Repeatability of clamping force <0.3%

<0.05 Platen parallelism (with load) <0.05mm

±0.03 Repeatability of mold opening/closing positions ±0.03mm

※The data above are derived from Yizumi's lab results and are for your reference only;

Three Major Customer Value Propositions

Stability & Precision:

High stability of the Tie-Bar Free (TBF) technology

Contact-free tie bars allow fast and stable mold opening/closing and significantly reduce energy consumption, causing no pollution to the work environment

Highly stable three linear guider support (TLGS) technology

High precision linear guide supports significantly reduce the friction of the plasticizing unit and improves the pressure stability of plasticizing and injection, resulting in stable product quality. In the meantime, the linear guide effectively reduces energy consumption and enhances the smoothness of mold opening/closing

High-precision sensor technology

The use of the world's leading position sensors with 2 million CPR resolution delivers incredible stability in position and speed control

Fully automatic lubrication system

While the lubricating grease works as the blood of injection molding machine, the fully automatic maintenance-free lubrication system ensures the long-term operation stability of the machine

Efficiency & Flexibility:

Double the injection speed

Compared with conventional machines, doubling the injection speed does more than shortening the injection time. It brings more possibilities to product design and allows customers to enjoy greater flexibility in terms of wall thickness, sprue size and precision of the molded parts

Plasticizing speed is significantly increased

The increase in plasticizing speed reduces the cycle time while delivering enhanced production stability

Increase mold opening and closing speed by 50%

Dry cycle has a great importance to customers as the faster dry cycle results in higher productivity

Multi-axis synchronization

As the mold opening/closing, injection, plasticizing, and ejection are driven by separate motors, the easy synchronization of processes reduces the cycle time of the production

Built-in hydraulic pump station

Support a variety of molding process with great flexibility and efficiency

Highly stable clamping unit

Fast and steady mold opening/closing speed. Repeatability of mold opening/closing positions $\pm 0.03\text{mm}$

High-rigidity design of movable platen

Provide good rigidity and uniform force distribution with platen parallelism $\leq 0.03\text{mm}$, suitable for injection molding with precision molds

European KEBA2000 controller

The powerful system is easy to operate and ideal for the high-performance solutions for electric injection molding machines

Excellent injection stability

More accurate control for more stable and reliable molding precision. The stability precision of injection pressure and holding pressure is at $\pm 0.1\text{Mpa}$

Automation & Intellectualization:

▶ Optimized automation interface for centralized control of integrated robot, hot runner, and auxiliary

▶ SMART mold protection to ensure the safe use of high-value molds in an unmanned operating environment

▶ The high stability and consistency of the machine process parameters allow unattended operation for an extended time

▶ Full data monitoring and extraction provide a solid foundation for intellectualization

▶ With accurate mold opening and full-featured second mold closing and opening, the automation of special process is fully warranted

▶ The intelligent sorting system automatically removes defect parts to ensure the production quality

▶ Combined with MES, the intelligent Statistics Process Control (SPC) helps to achieve automation and informationization

▶ Smart Clamping Force Management (SCFM) system

▶ Smart Injection Control (SIC)

▶ Integrated factory management system with Yi CMS + Yi MES

Clamping Unit

High stability of the TBF technology

- ▶ The clamping unit adopts the TBF (Tie Bar Free) technology for easy operation and maintenance
- ▶ Keep the mold area clean to prevent product contamination

Linear rail moving design for mold opening/closing

- ▶ The directional accuracy reaches **0.02mm**
- ▶ Fast and steady mold opening/closing speed. Repeatability of mold opening/closing positions **±0.03mm**

High-rigidity design of movable platen

- ▶ Offer great rigidity and uniform distribution of force
- ▶ Suitable for injection molding with precision molds
- ▶ High repeatability of mold-open end position
- ▶ Platen parallelism (with load) $\leq 0.05\text{mm}$ (FF100-260-N)
- ▶ Platen parallelism (with load) $\leq 0.08\text{mm}$ (FF330-420-N)
- ▶ Faster dry cycle

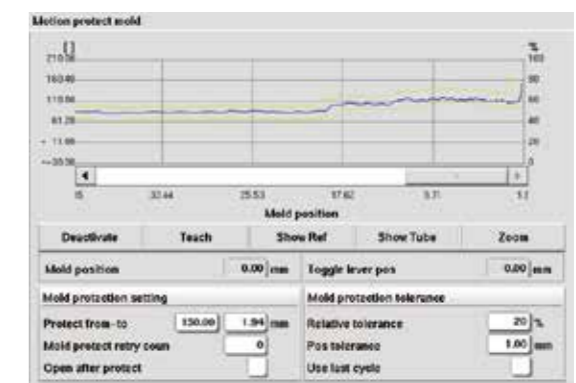

Dual-cylinder parallel ejection design

- ▶ Uniform force application for mold release
- ▶ Servo motor driven ejection is optional
- ▶ Can achieve functions such as various modes of synchronized ejection and ejector retraction, gate cutting inside the mold, etc.
- ▶ Accuracy of ejection position up to **0.2mm**, conducive to product accuracy and repeatability.

Unique "SMART" mold protection feature

- ▶ Can detect very small obstacles and resistance
- ▶ Reduce the extent of mold damage when there are foreign objects in the mold cavity or faulty operation occurs

Injection Unit

The use of advanced LGS (Linear Guide Support) technology

- ▶ Integrated design enhances the overall rigidity of the injection unit
- ▶ No unnecessary friction. Fast forward and backward

Close-up

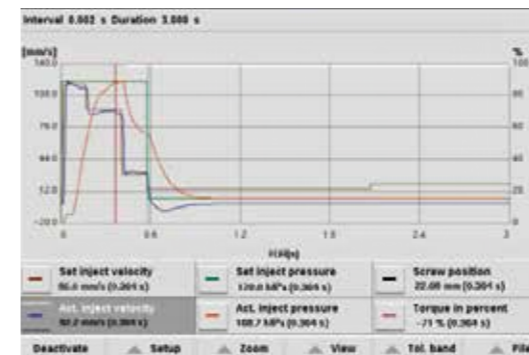

Dedicated screws for different materials

- ▶ DIN standards for barrel unit size, processing accuracy, surface finish, and material selection
- ▶ Increase the repeatability of injection

Temperature closed loop control

- ▶ Static deviation: $\pm 0.5^\circ$

Closed loop injection pressure control technology

- ▶ Provide more accurate control for more stable, reliable and precise molding.
- ▶ The stability precision of injection pressure and holding pressure is at $\pm 0.1\text{Mpa}$

※ All data on the page comes from YIZUMI factory, please refer to the actual customized equipment.

Electrical Control System

Using European KEBA2000 Controller

- ▶ The powerful system is easy to operate and ideal for the high-performance solutions for electric injection molding machines
- ▶ 12-inch HD color touchscreen display with clear and neat screen layout
- ▶ Standard Process quality control (PDP), and Statistical process control (SPC) features
- ▶ Auto-sorting function
- ▶ Oscilloscope with chart display function to record the curve of process data change
- ▶ Centralized (networked) real-time remote operation and control
- ▶ The flexible I/O expansion modules allow integration of more features as needed and are programmable

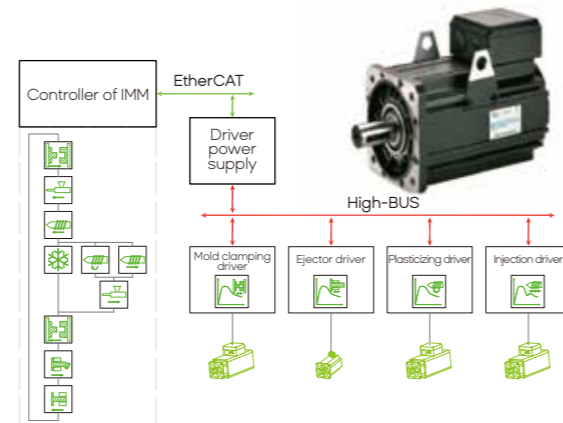

Threaded design
Stronger 3D effect

- ▶ Advanced HW and SW systems to support Industry 4.0
- ▶ 1ms scan cycle
- ▶ 16 levels of user access management to ensure data security

Unique servo direct control (SDC) technology

- ▶ Process algorithm independently developed by YIZUMI for the servo drive
- ▶ Four servo motors control injection, plasticizing, clamping, and ejection independently, allowing faster feedback, more responsive control, and improved control accuracy
- ▶ More precise control of speed, position and pressure to meet the requirements of precision equipment

All-metal baseboard for the electric control unit

- ▶ Galvanized mounting plate for better cooling and anti-interference capacity

Standardized wiring layout

- ▶ Neat wiring and standardized interface layout for easy operation

Modular Injection Unit Selections

The modular injection unit allows flexible combination with a number of options to quickly meet various application needs:

- ▶ 100T~1510T clamping force, 13 clamping modes
- ▶ 13 injection unit configurations, screws range $\Phi 22\sim\Phi 116\text{mm}$
- ▶ Each clamping mode has the option to select different injection units and 9 types of barrel units
- ▶ Cover injection speeds of 160/200/300/350 (mm/s)

FF1510-N Platen Dimensions

Standard Features

Control and monitoring unit

- 480v/3pH/60hZ
- Highly sensitive 12-inch color touchscreen display
- Memory of molding conditions (over 500 items)
- 1 set of standard USB interface on the operation panel
- Multiple language (Chinese and English)
- Real-time display of injection molding data (200 items displayed; 5000 items saved)
- Operation modification record
- Alarm record
- Electrical control circuit for simple robot
- Metric and English unit conversions
- I/O check display function
- Printer interface (USB 17)
- Cycle time monitoring
- Production management
- PDP data and charts
- Injection quality check
- Cycle counter
- Molding temperature monitoring
- Tri-color alarm light
- Alarm buzzer
- Low-pressure mold protection curve checking
- Injection pressure protection
- Defect alert and handling
- Real-time display of injection and plasticizing servo motion curves
- Display of actual value
- Malfunction handling option selection
- Product quality monitoring
- Curves of mold opening/closing and ejector
- Injection processing curve monitoring

Clamping unit

- 5-stage mold opening and closing control
- Needle valve/Spure functions (4 sets)
- Multi-stage ejector forward
- Ejector backward delay time monitoring
- Automatic mold height adjustment
- Spure timing control
- Curves of mold open/close and ejector
- Platen with T-slot and mold mounting holes
- Low pressure mold protection (AI highly-sensitive mold protection)
- Low speed, low pressure mold opening / closing in mold adjustment mode
- Ejection inside the mold (gate cutting inside the mold)
- Mold opening during ejector backward
- Ejector backward in place confirmation
- Ejector motion selection (4 modes)
- 3-stage ejector control
- Ejector motion delay
- Mold cooling water distributor
- Embedded dual-size locating ring design (fixed platen)
- Emergency stop function (on both operator side and non-operator side)
- EU standard threaded mounting holes for robot
- Central lubrication system
- Slope control for mold opening and closing (high, medium and low modes)
- Core puller/unscrew function (2 sets of electrical interfaces)
- Air blast (4 sets of electrical interfaces)
- Hydraulic ejector

Plasticizing and injection unit

- Injection safety device (Test switch)
- 5-stage injection control (pressure, speed, position)
- 3-stage holding pressure control (pressure, speed, time)
- 3-stage plasticizing control (back pressure, speed, position)
- Suck-back control (pre-suckback and post-suckback)
- Injection delay function
- Pre-plasticizing delay
- Holding pressure switching (6 modes)
- Injection speed response setting (High, medium, low)
- Mold opening during plasticizing
- Molding temperature closed-loop control
- Temperature holding
- Temperature optimization
- Synchronized temperature rise
- Appointed temperature rise
- Remaining resin prevention
- Screw cold start prevention
- Automatic material purge
- Calibration of injection pressure zero point
- Real-time display of plasticizing speed
- Real-time display of plasticizing back pressure
- Injection unit shift settings (switch check, shift time)
- High-force nozzle contact device (configurable)
- Nozzle center alignment adjusting device

Other features

- Color of FF series electric injection molding machine
- Closed safety door
- Adjustable vibration-damping wedge mount
- Hopper sliding device
- Common tool kits and spare parts

Optional Features

Control and monitoring units

- EU12 electrical interface for robot
- EU67 electrical interface for robot
- Additional languages
- Cooling water circuit
- Heater burnout detection
- External transformer
- Electrical interface for product sorting device
- Electrical interface for gas assisted injection
- Electrical interface for magnetic platens
- Electrical interface for mold cavity pressure check
- Mold temperature display and control
- OPC UA/DA
- EU 73 electrical interface

Clamping unit

- Various locating rings
- Core unscrewing device
- Needle valve/spure device
- Air blast device
- Product chute
- Mold thermal insulation plate
- Glass-tube cooling water flowmeter
- Pneumatic ejector
- Pneumatic core puller device
- Increased Maximum daylight
- Mold slide protection
- Injection compression (clamping synchronized with injection)

Plasticizing and injection unit

- Dedicated barrel unit
- Extended nozzle
- Spring shut-off nozzle
- Stainless steel hopper (max. load of 50kg dry material)
- Barrel heat-retaining energy-saving device
- Ceramic heater band
- Mold internal pressure V/P switching
- Needle valve pneumatic injection nozzle
- High capacity injection nozzle heating band
- Customized nozzle head

Other features

- Hopper sliding device (on wheels)
- Barrel heat-retaining energy-saving device
- Auxiliary electrical cabinet
- Vacuum air extractor
- Quality control sorting device
- Integrated multi-stage mold temperature control
